

r5 Diagnostic: Order Stability Reward During Disruption
(500-episode trained agent, 5 eval episodes averaged, MAB off, equal weights, 50% moderate disruption)

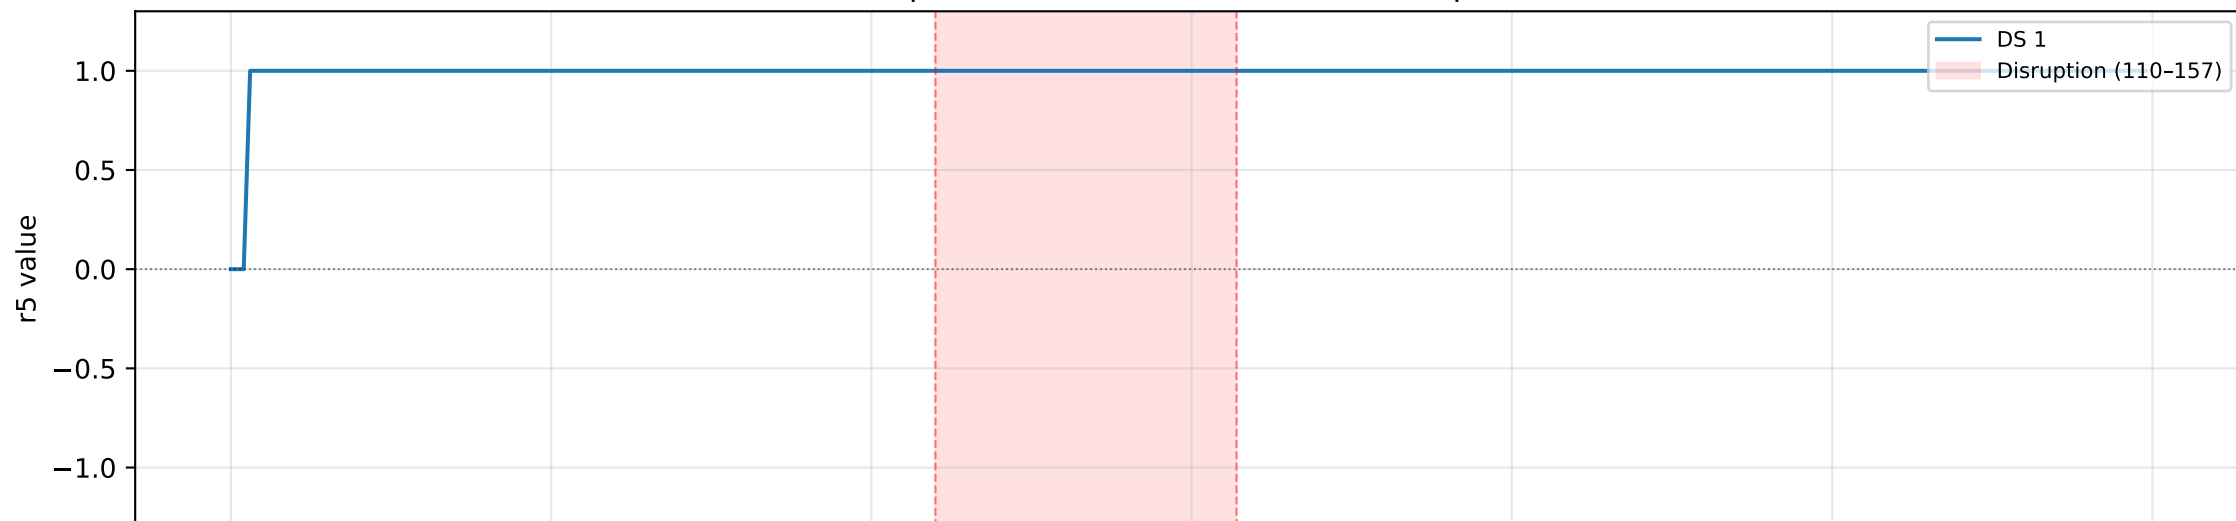

(1) Order quantity over time

(2) Rolling order-action slope β_1 — r5 fires +1 when $|\beta_1| < 1$

(3) r5 output (+1 = stable rewarded, -1 = penalised)

(4) DS1 DRL vs DS2 base-stock backlog (solid); HC backlog (dashed)
